PROTECTING NEW ZEALAND'S BORDER

24 November 2010

Kevin Tansey
Safepak Limited
PO Box 46018
Auckland 1147

Dear Kevin,

I refer to your application of 15 November, 2010 for approval of a seal (sample and details supplied) for use on shipping containers exported under the New Zealand Customs Service Secure Exports Scheme.

The samples supplied are noted as high security bolt seals 'Hi-Genius', manufactured by UNISTO and have been designed to exceed the minimum diameter future requirement for the Metal Components.

This seal has been tested by Dayton T Brown Inc of USA and is certified as being compliant with ISO/PAS 17712:2006 (E) standard as a 'high security' seal dated 24 May, 2010. Testing documents have been supplied and are now held on file.

This seal meets the New Zealand Customs Service minimum requirements for a seal intended for use on shipping containers and is approved for this use. The seal must have the alpha numeric serial number on both the locking pin and barrel. Please note the seal must also have the words 'NZ Customs Approved' on the locking pin

Please note that the seal must be white unless approved otherwise.

The Hi-Genius seal is intended for use by Secure Export Partners exclusively for use on export shipping containers sealing the container doors.

Yours faithfully,

Michael Hawthorne
Chief Customs Officer
Client Services
